

### LOW-EMISSION RURAL DEVELOPMENT (LED-R) AT A GLANCE

- Majority rural population, over 25% indigenous
- High ecological vulnerability & natural disasters magnify impacts on rural, high-poverty areas
- 4 Investment Programs (PI) of national FCPF Carbon Fund Emissions Reduction Initiative (IRE) cover 58% of state forest area
- Target beneficiaries of programs include forest populations living in extreme poverty, indigenous peoples (IP), landowners
- Several multi-stakeholder councils advise the State Commission for Inter-Secretarial Coordination on Climate Change (CICCCCH)
- 1st Mexican state to develop its Technical Advisory Committee for REDD+ (CTC-REDD+)
- 57% of state emissions come from agricultural frontier expansion

**DRIVERS OF DEFORESTATION**

- Small-scale agriculture
- Small-scale cattle ranching
- Large-scale agriculture
- Small-scale illegal timber harvest
- Fire

**AVERAGE ANNUAL EMISSIONS FROM DEFORESTATION**

5.90 Mt CO<sub>2</sub> (2010-2015)  
Includes above-ground biomass

**AREA** 73,289 km<sup>2</sup>

**POPULATION** 5,445,233 (2018)

**HDI** 66.73 (2012)

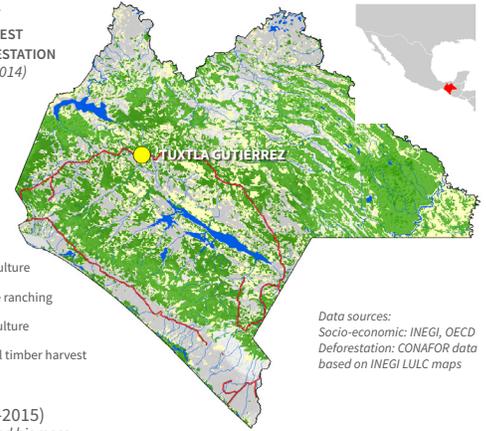

**GDP** USD 14.90 billion (2016, Base year 2013)

**GINI** 0.520 (2014)

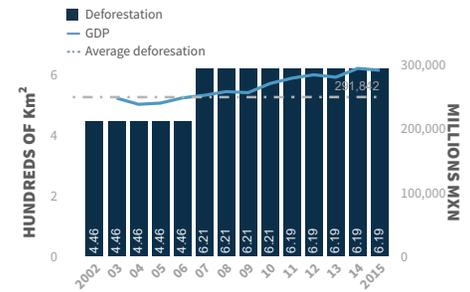

**MAIN ECONOMIC ACTIVITIES**

- Trade
- Public services
- Real estate services

**RURAL/URBAN POPULATION** 51%/49%

Data sources:  
Socio-economic: INEGI, OECD  
Deforestation: CONAFOR data based on INEGI LULC maps

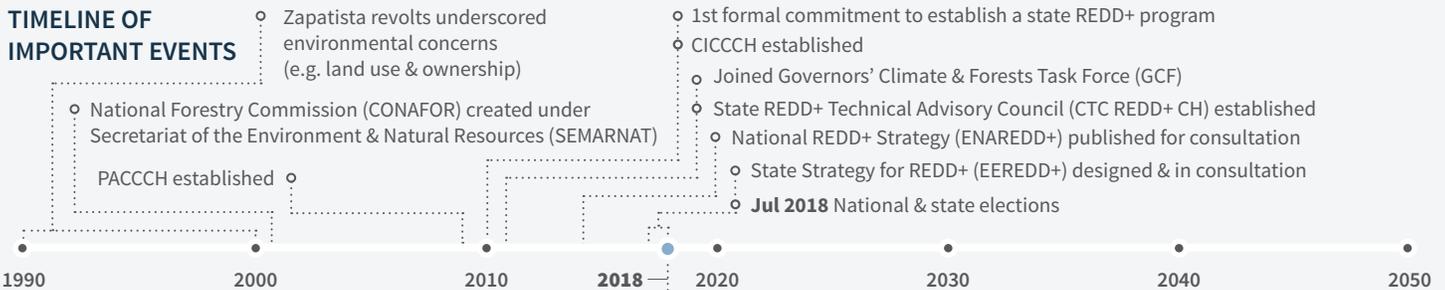

### SPOTLIGHT ON INNOVATION

In Chiapas, **public-civil society partnerships** are illuminating the power of cross-sectoral collaboration to drive forward the state's LED-R agenda. Non-governmental organizations (NGOs) collaborate successfully with public agencies to develop and implement LED-R activities, and to support and improve their operations. NGOs range from local to global in scale, and occupy a spectrum of roles including policy design, stakeholder coordination, and financial, technical and research support. Through these diverse roles, NGOs drive development and enforcement of state policies further than the public sector can on its own – ultimately transferring certain knowledge and processes to the public agencies themselves. For example, NGOs and academia are collaborating with SEMAHN to develop a state MRV

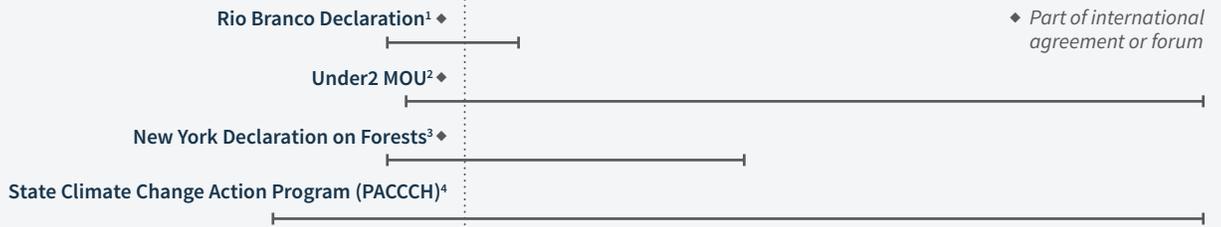

system based on the national system. Through this partnership, they are able to build not only a system that addresses the specific needs of the state in terms of detailed land use, but also simultaneously SEMAHN's capacity to manage the MRV. SEMAHN receives the technical support it needs for its LED-R activities that otherwise would be unavailable due to limited funding availability from the national budget. The multiple NGOs functioning in the same sphere work collaboratively and complementarily to optimize impact, in non-proprietary ways that fortify state-level governance. As a result, the organizations gain national and global recognition and credibility, which can lead to increased funding opportunities and interest at the international scale.

#### TIMELINE OF IMPORTANT EVENTS

#### PLEDGES & COMMITMENTS

##### JURISDICTIONAL

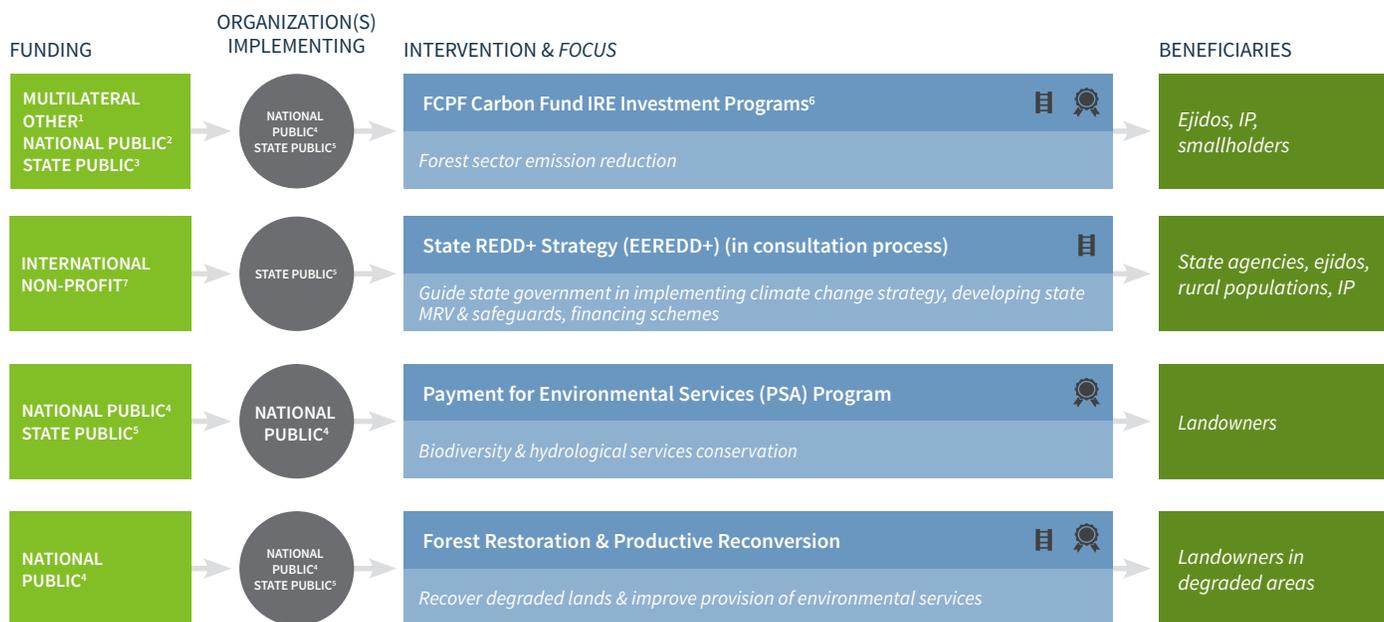

##### NATIONAL

Nationally Determined Contribution (NDC) to UNFCCC<sup>6</sup>

1 Reduce deforestation 80% below baseline. 2 Limit emissions 80-95% below 1990 levels. 3 End deforestation. 4 Contribute to national emission reductions & be an example for low-carbon development & climate change mitigation. 5 Restore 0.17 million ha (2020), contributing to Mexico's national 8.5 million ha pledge & 0.18 million ha (2030) as stand-alone commitment. 6 Contribute to national goal: Reduce GHG 25% below BAU (up to 40% conditional on global agreement).

# KEY INTERVENTIONS

✘ DISINCENTIVES    📋 ENABLING MEASURES    🏆 INCENTIVES

1 World Bank. 2 CONAFOR, SEMARNAT, National Commission of Natural Protected Areas (CONANP), Secretary of Agriculture, Cattle Ranching, Rural Development, Fisheries & Food (SAGARPA), National Commission for the Knowledge & Use of Biodiversity (CONABIO). 3 Rural Secretariat (SECAM). 4 CONAFOR. 5 State Secretary of Environment & Natural History (SEMAHN). 6 4 PI in Istmo-Costa, Lacandona, Zoque-Mezcalapa, Frailesca regions. 7 Mexico REDD+ Alliance (The Nature Conservancy, Rainforest Alliance, Woods Hole Research Center, Espacios Naturales y Desarrollo Sustentable) through USAID.

## PROGRESS TO JURISDICTIONAL SUSTAINABILITY

○ EARLY    ● INTERMEDIATE    ● ADVANCED

<b>Integrated LED-R Strategy</b>	○	• EEREDD+ will be a statewide planning instrument for LED-R & includes a vision for a state REDD+ mechanism for 2020
<b>Spatial plan</b>	●	• State Ecological & Territorial Ordering Program (POETCH) regulates land use for entire jurisdiction; however, low capacity for enforcement
<b>Performance targets</b>	○	• Chiapas Climate Change Action Plan (PACCCCH) includes overall & short, medium, & long-term goals • State unlikely to meet deforestation & emissions reduction targets due to lack of familiarity or recognition by some government agencies & civil society
<b>Monitoring, reporting &amp; verification (MRV)</b>	○	• CONAFOR manages MRV nationwide, including national monitoring system for forest cover change (SNMF) • PACCCCH includes State GHG Inventory (IEGEI) & Environmental Information System; however, inadequate financial support for operation
<b>Policies &amp; incentives</b>	○	• State Development Plan (PED), PACCCCH, EEREDD+ coordinated by CTC-REDD+, CCICCCCH, & other forums • State policies do not incorporate incentives; some national-level incentive programs active in the state (PSA, IRE)
<b>Multi-stakeholder governance</b>	●	• Representatives from diverse sectors advise CCICCCCH through Consultative Council on Climate Change (CCCCCH) • PACCCCH, POETCH, EEREDD+ developed through participatory processes including diverse stakeholders
<b>Sustainable agriculture</b>	●	• Various coffee producer organizations provide technical support, finance, & capacity building programs • Beef & palm oil sectors largely unregulated
<b>Indigenous peoples &amp; local communities</b>	●	• State Constitution includes Indigenous Rights & Culture Law • PED establishes State Secretary for Sustainable Development of IP, & transparency platform for IP rights frameworks
<b>LED-R finance</b>	○	• National & state government interests in cattle ranching & productivity → low budget for environmental programs • EEREDD+ proposes a State Environmental Fund (FESA) as a public-private financing instrument to diversify sources

## CHALLENGES & OPPORTUNITIES

### CHALLENGES

- Tracking progress to performance targets difficult (many internal targets qualitative & lack definitive timeframes)
- Public agencies generally not cognizant of state deforestation & emission reduction targets
- Heavy reliance on federal government for funding, MRV, information & analyses & lack of state capacity to produce data tailored to state needs
- Low productive diversity hinders economic growth
- Low coordination of agencies → poor implementation & enforcement of laws & programs
- Corruption at different levels of government
- Outsized role of middlemen, insufficient regulations, & inadequate incentives for producers impede beef industry in improving sustainability

### OPPORTUNITIES

- SEMAHN continues to develop & implement sub-state (e.g. watershed-based) Ecological & Territorial Planning programs
- EEREDD+ permits state to set time-bound goals & improve action plan for addressing deforestation drivers, including development of state forest monitoring system
- Potential to scale up positive experiences within Natural Protected Areas (e.g. organic coffee, resin management) to state level
- EEREDD+ & other state-specific programs boost interest in & understandings of jurisdictional LED-R concepts, driving state to prioritize advancing LED-R & aligning sectoral programs in budget allocation
